DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7, drawn to a tachycardia classifying system using QRS complexes, classified in class 600, subclass 517.
- II. Claims 8-10, drawn to a system to declare VT, classified in class 600, subclass 515.
- III. Claims 11-22, drawn to a system to detect and classify VT or SVT, classified in class 600, subclass 518.

The inventions are distinct, each from the other because of the following reasons:

Inventions I (combination) and II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require classifying SVT. The subcombination has separate utility such as a system to classify tachycardias not requiring means for sampling QRS points on a NSR or tachycardia complex, but by using the ST wave or T wave amplitude.

Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant

case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination does not require receiving cardiac rate signals. The subcombination has separate utility such as a system to classify VT and SVT not requiring means for determining whether a number of VT complexes exceeds a predetermined threshold but by declaring VT when the cardiac rate is fast.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Marvin Beekman on May 30, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George R. Evanisko whose telephone number is 571 272 4945. The examiner can normally be reached on M-F 6:30-5:00.
